:- PROJECT ON DEFORESTATION

INTRODUCTION

Deforestation is the permanent destruction of indigenous forest and woodlands. In many parts of the world the forest is taken for granted as a replenishable resource which it is. The problem is that the trees cannot be regrown and replanted at the rate at which they are being cut down. It is supply oxygen absorb carbon dioxide & hold down the soil from washing away & making landslides.

The destruction and cutting down of forests is done for many reasons but most of them are related to money or to people's need to provide for their families.

Green Business concern reuse and recycling green methods of production and utilization resource can immeasurably reduce deforestation it's the focus on reusing items, and recycling more items

Eco forestry is a move on saving the world forest it acknowledge that sometimes, the use of trees for various human activities or reason can be inevitable

community forestry is whereby local communities together with their local government & other local organization such as schools

Replanting of trees planting utilizes almost the same aspect as community forestry

Joint organization conservation wild life and nature protection agencies among other environmental program me can join together with a common goal of preserving restoring and protecting forests to ensure permanence of the world's natural resources.

PAGE NO. _____
DATE ____/____/____

* Objectives *

To Study about deforestation in chopda city and nearby region

To Study out the major cause of deforestation in chopda city and nearby region.

To Study the effect of deforestation in chopda city nearby region.

To suggest remedial programme to control deforestation

Promote societies in harmony with nature, while adapting climate change.

* conservation *

Forest also reduce air pollution forests also prevent soil erosion and keep soil pollution in check deforestation in fact, leads to soil erosion on a large scale since the top soil comes loose pores, also play an important part in the water cycle and control moisture levels of our ecosystem

the most important function of forest is that it produces mass amount of oxygen as by product of photosynthesis

Did you know that forests are called the lungs of the environment they are a factory of oxygen and various other very important natural resources can humans live without their lungs? Similarly the environment too would not survive without forests

Forest conservation as the name suggests is the preservation and the protection of forest

It's a very comprehensive study of the world's forests for the first time we have consistent and comparable global and regional long-term data on forest loss and use - up until now most available

* conclusion *

Population of the earth trees and forests are converted to form land. This has become a threat to the world and it has been seen that rates of decline in the forests are increasing at a rapid rate. This has led the planet to warm up and leading to high temperature. This cycle would continue for the following years to come unless necessary steps are taken to prevent deforestation.

Deforestation has caused fewer trees to grow. It has also gone a long way in eliminating valuable ecosystems in the planet. Deforestation is a very harmful to our community and to other communities around the world. We should reject and avoid causing deforestation by recycling our paper and not throwing it away because then in the future more trees would need to be cut down. So if we just keep reusing paper it would be more sustainable to our environment.

PROJECT ON DEFORESTATION

Introduction

Deforestation is the permanent destruction of indigenous forest and woodlands in many parts of the world the forest it taken for granted as a replenishable resource which it is the problem is that the trees cannot be regrown and replanted at the rate at which they are being cut down. It is supply oxygen absorb carbon dioxide & hold down the soil from washing away or making land slides.

The destruction and cutting down of forests is done for many reasons but most of them are related to money or to people's need to provide for their families.

Methodology

A methodology to estimate impacts of domestic policies on deforestation compensated successful efforts for avoided deforestation (REDD)

climate change mitigation would benefit from reduced emission from deforestation and degradation (REDD) in developing countries the methodology was presented to measure these efforts (labeled compensated successful efforts) it based on the rationale that overall deforestation is partly due to structural factors and to domestic policies for and measuring this typology differs from other presented in the literature such as proximate underlying causes or economic factors last such as estimation of avoided deforestation programs to curb deforestation it would help to distinguish between successful and unsuccessful policies

Although any predication of deforestation rates is challenging and any negotiated target is subject to obvious political influence In

other words proposals focus on results based approach - carbon credits and distribution of financial compensation could threaten respectively environmental integrity of scheme and equity outcomes. Rather than considering overall deforestation we argue that REDD mechanism of carbon finance to real efforts that developing countries implement for slowly deforestation rates.

The methodology we present to measure these efforts is based on is partly due to structural factors & to domestic policies and measures this typology differs from other presented in the literature such as proximate cause or economic factors.

using economic model our approach estimate efforts that are

- i) independent of structural factor
- ii) estimate ex post at the end of crediting period
- iii) relative to other countries etc.

observation *

observation is the removal of trees for certain as but resulting in damage to the land. It may or not be intentional. At some times the worst affect a deforestation, has an nature is loss of habitat for many different organism. I observed that in Kalamazoo Michigan a man bought a big piece of land full of trees. Residents the area have claimed that there is deforestation in their back yards. The man chose to cut down over 20 trees absorbed carbon dioxide and release oxygen making the peoples lives depend on them. This strange situation has brought sad faces to residents in that area. Local problem of deforestation the conversion of forest to unforested a years has been occurring since human began to impact and change their environment.

the most important function of forest is that is produce

Solutions

Deforestation is an important issue to be discussed it has adverse effects on each living beings life. Deforestation has become a huge concern in today's life as there has been a rise in the decline of forest. Trees are cut down in order to manufacture paper products as well as for livestock farming and so on.

In order to feed the ever increasing population of the earth trees and forests are converted to farm land. This has the best solution is curb the felling of trees by employing a govern it clear cutting of forests must be banned and skinne of it's trees cover for urban settlements should be urged to plant trees in the vicinity and replace the cut trees.

Trees play a vital role in protecting our environment in several ways. Fewer forests mean that the sustainability of our planet earth is endangered so far there are action and measures that are being undertaken to curtail deforestation.

Green Business concern reuse and recycling
Green methods of production and utilization of
resources can immeasurably reduce deforestation
Station it's the focus on reusing items and
recycling more items

Eco forestry is a move on saving the world
forest it acknowledge that sometimes the

INDUSTRIAL POLLUTION

- project on Air pollution -

Introduction -

Today, Air pollution has emerged as a global public health problem and is identified as a major environmental health hazard by agencies such as the World Health Organization and government around the world.

An increase in concentration of pollutants both gaseous and solid is among the largest health risks in outdoor air pollution according to the latest data released by WHO indoor and outdoor air pollution.

The air quality in most Indian cities that monitor outdoor air pollution fail meet WHO guideline for safe levels.

Teacher's Signature _____

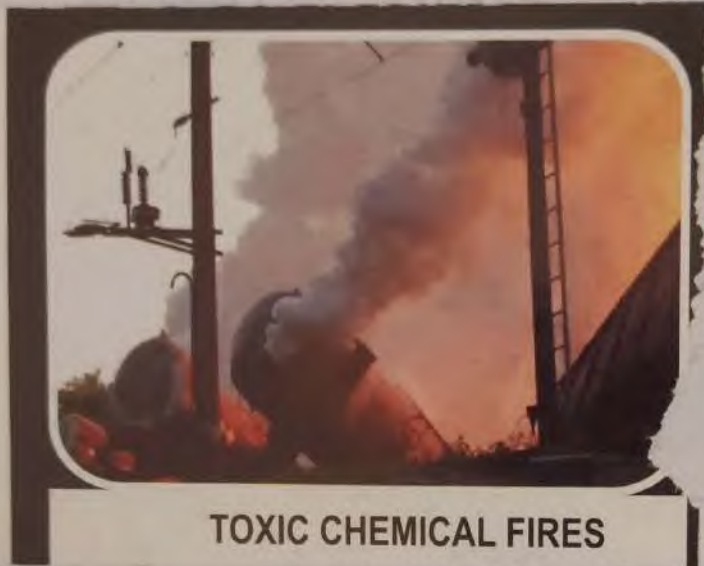

* Need and Importance to study air pollution -

Air pollution is the most important one among those causes involvement. Reducing pollution in the air is important for human health and environment. Hence the study of air pollution is very important. Since the air pollution control is necessary for the better environment.

The levels of $PM_{2.5}$ are greater than PM_{10} (air-borne particles with diameter 2.5 micrometer in diameter and 10 micrometer in diameter) as well as concentration of dangerous carcinogenic substances such as sulphur dioxide (SO_2)

Project of air pollution

Introduction:-

Today, air pollution has emerged as a global public health problem and is identified as a major environmental health hazard by agencies such as the World Health Organization (WHO) and governments around the world. An increase in the concentration of pollutants - both gaseous and solid - is among the larger health risks in the world and according to the latest data released by WHO, indoor and outdoor air pollution were responsible for 3.7 million deaths of people aged under-60 in 2012. In recent years, pollution has acquired critical dimensions and air,

Methodology :-

survey method :-

A survey is define as a research method used for collecting data from of pre-define group of respondents to gain information and insight on various topic of interest, surveys have a variety of purposes and can be carries out in many ways depending on the methodology chosen and the objectives to be achieved.

observation method.

observation research is a qualitative research technique where researchers observe participant's ongoing behavior in a natural situation depending on the type observation research and the goal of the study.
